

LEAD SERVICE LINE INVENTORY: VERIFY TODAY!

HOW TO VERIFY YOUR WATER SERVICE LINE MATERIAL

YOU WILL NEED

Flashlight, magnet, key (or coin), utility bill

STEP 1

Locate your water service line coming into your building or home through the wall or floor. The pipe is usually located in the basement or lowest level and connected to the water meter.

STEP 2

Use this chart to identify your service line material. Use a key to 'scratch test' and use a magnet to see if the pipe is magnetic. Once identified, take a photo of the pipe from one foot away, focusing on where the pipe enters the house. Make sure the image is well lit!

LEAD	GALVANIZED METAL	COPPER	PLASTIC
Dull, silver-gray, often curved	Dark gray or black, straight and rigid	Brown, can have green spots	White, straight and rigid
Easily scratched, shows shiny silver	NOT easily scratched, will remain gray	Will show bright copper, like a penny	Will scratch off pieces if scratched hard enough
Not magnetic	Magnetic	Not magnetic	Not magnetic

STEP 3

Locate a Utility Bill, find your account number, then go to cityoflancasterpa.gov/verify-lead-service-line. Complete the form, and upload your photo.

If you need assistance locating your Account Number, please call 717-735-3425.

Use this QR code to go directly to the verification form!

Once City staff confirms you have a lead or galvanized line, you will receive follow-up instructions.

The City of Lancaster will replace all lead and galvanized lines in accordance with state regulatory requirements.
